

TOUR TALK

TOUR GUIDE SYSTEMS

A Tourtalk tour guide system reduces frustration and confusion for your guests and stops you straining your voice.

No longer do you have to compete with noise or distance to be understood.

Ensure you are clearly heard on your next tour and provide a professional experience!

The Tourtalk TT 100-TG23H is a complete tour guide system comprising 2 transmitters with lapel microphones (for the guides), 23 receivers with headphones (for the audience) and a charger transport case.

Examples of use

Bus and City tours

Factory and Plant tours

Museum and Heritage site tours

How it works

The Transmitters

Each transmitter features an integrated microphone, microphone socket (to connect the lapel microphone), and microphone mute switch. An aux-in socket to enable the connection of a smartphone is also provided.

The guides can speak at a comfortable level without having to shout. They can even whisper if the tour is in a noise sensitive area e.g. Art gallery.

The Receivers

The receivers feature a jack socket to connect the lightweight headphones. The guests can adjust their own volume to a comfortable level.

A wide range of accessories are available for the Tourtalk system to suit many applications. For more information please visit the website.

TT 100-TGC13H

Tourtalk TT 100 systems are also used for:

- **Simultaneous Interpretation**
- **Hearing Support**
